Employment Insurance

Trends and Usage of Employment Insurance (EI) in Newfoundland and Labrador gives a statistical overview of past and current trends in program usage in the province. Since Confederation, when the Unemployment Insurance (UI) Program was introduced, UI/EI programs have played a role in the Province's labour markets. Historically many workers enter and exit the program as seasonal work begins and ends each year. As a result, UI/EI data provide useful information regarding the situation and events in the labour market and economy.

Since 1990, the Province's economy has experienced a recession, a collapse of the ground fishery, high levels of, as well as declining, out-migration and an economic recovery with some of the highest levels of performance recorded in Canada. All of these events have impacted UI/EI usage and are reflected in the statistical trends found in the data. The purpose of this brief document is to provide statistics on major trends since the early 1990s to 2005 (most recent reliable data). While the report is not an "analytical" document, it does provide information regarding labour market and economic performance and aspects of the dynamics of our economy that relate to E.I. usage in the province. It is intended to provide data for input to analysis that might be carried out to explore issues reflected by the data.

seasonal patterns

Chart 2

Newfoundland and Labrador Statistics Agency: Special Tabulation

The Rise and Fall of EI

Employment Insurance (EI) usage peaked in the early 1990s at an annual average of approximately 80,000 beneficiaries.[1] The number of claimants rose steadily throughout the 1980s. Since the mid-1990s usage has declined to 1980 levels.

The increase in the number of claimants during the 1980s mirrored growth in employment. As more individuals, especially women, entered the labour force in primarily seasonal occupations, the number of individuals who were able to access UI increased.

A downturn in the economy in the early 1990s, the groundfish crisis, out-migration and tightening of EI regulations throughout the 1990s have caused the number of claimants to decline dramatically. The increase in full time employment in recent years has also contributed to a leveling off in EI usage.

EI Usage is Seasonal

The seasonal pattern of EI usage is consistent with labour market activity. Most claims are initiated in the fall of the year as many seasonal jobs begin to wind down. In 1992, 48% of total claims initiated in the Province were started between September and December. The comparable figure for 2005 was 55%.

[1] *Prior to 1996, this program was called Unemployment Insurance (UI). Throughout this report, references to Employment Insurance (EI) prior to 1996 are to be interpreted as being the same program.*

Employment Insurance

trends and usage in Newfoundland and Labrador

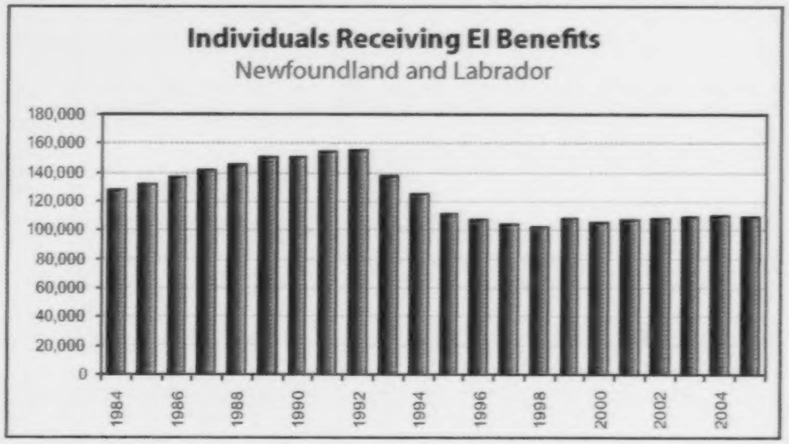
100,000+ Individuals Use EI Annually

The number of different people who access the program for some period of time during the year is over 100,000, significantly higher than the monthly average. This figure had peaked at nearly 156,000 in 1992, but since major reform of the program in 1996, it has remained relatively constant between 103,000 and 110,000 people.

EI beneficiaries

Chart 3

Annual T4U and T4E counts. Statistics Canada, Labour Division and Small Area Administrative Data Division



Many EI Beneficiaries are Frequent Users

Approximately two-thirds (67%) of all EI beneficiaries between 2001 and 2005 had more than one claim. 50% had three or more claims in the 5-year period; 30% claimed benefits on five or more occasions. While there is no standard definition of what constitutes a frequent user, it is generally accepted that individuals with three or more claims in a 5-year period are considered frequent users. The proportion of frequent users has changed little from the 1992-96 pre-reform period (46% to 50%), however those individuals with 5 or more claims increased from 22% to 30%. The increase in this category is largely due to the 1996 EI reforms which enabled many fish harvesters to collect benefits on more than one claim in a single year (see "Fish Harvesters" section later in this report for more detail).

frequent users

Live in urban location	32%

* *Frequent Use - 3 or more claims in 5-year period*

Table 1

Newfoundland and Labrador Statistics Agency: Special Tabulation

Employment Insurance

trends and usage in Newfoundland and Labrador

Total EI Income is Down From Early 1990s

The amount of funds entering the economy through EI benefits is significant. In 2005, $899 million in EI related benefits was paid to individuals in the Province. $588 million was paid to regular beneficiaries, $136 million was paid through fishing type claims and $175 million in other EI benefits.[2] The total figure is down from 1992 when nearly $1.1 billion in total benefits was paid.

annual benefits

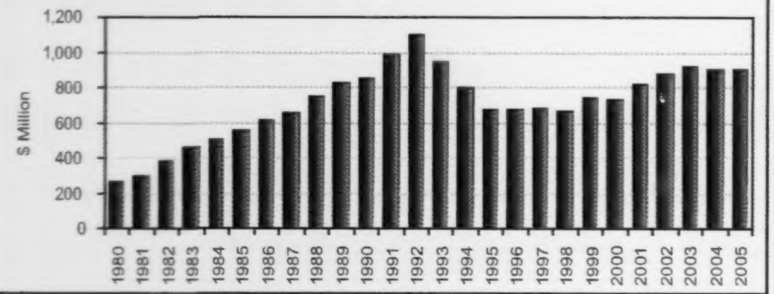
Total Annual EI Benefits Paid
Newfoundland and Labrador



Proportionally, Female EI Usage has Declined More Than Males

While the increase in EI usage in the 1980s was primarily due to more females accessing the program, the decline since 1992 shows a higher percentage decline for females. Between 1992 and 2005, the number of males receiving regular benefits has dropped by 27,600 (34%); females have declined by 25,800 (42%).

Employment Insurance

trends and usage in Newfoundland and Labrador

by age

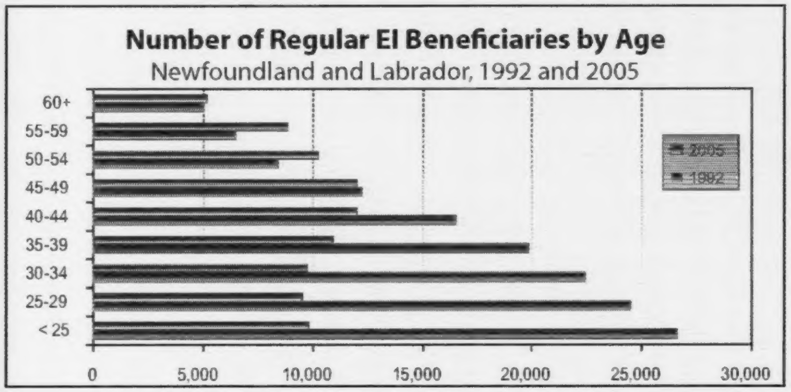

Chart 7

Newfoundland and Labrador Statistics Agency: Special Tabulation

Large Decline in the Number of Younger Claimants

Out-migration, an aging of the population, increased employment opportunities, increased enrolment in educational institutions and tightening EI entrance requirements during the 1990s have contributed significantly to the reduction in the number of younger people who access the program. In 1992, 52% of regular beneficiaries were less than age 35; only 33% of beneficiaries were under 35 in 2005.

The younger the age, the larger has been the decline; the number of individuals less than 25 has declined by 63%, 25-29 by 61%, 30-34 by 56%. In 1992, half of all regular beneficiaries were age 34 or less; in 2005, the median age has increased by seven years to age 41.

Total	140,640	87,700	(52,930)	-38%

Table 2

Newfoundland and Labrador Statistics Agency: Special Tabulation

** Excludes those employed as fish harvestors*

Large Decline in EI Claimants in Almost All Sectors

With the exception of Other Primary, there has been a decline in regular beneficiaries in all occupation types since 1992. The largest proportional decline was for construction labourer and related occupations which has dropped 60% since 1992. Benefits for clerical workers have also significantly declined by 59%. The only occupation near 1992 levels of EI usage is fish harvesters (shown in a later table).

Employment Insurance

trends and usage in Newfoundland and Labrador

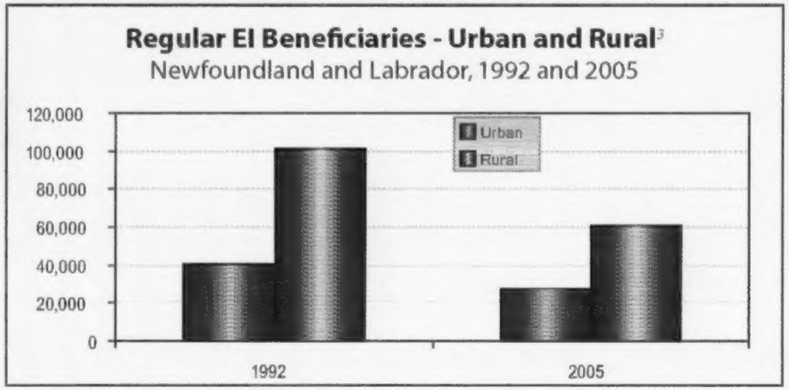
Declining EI Usage is Higher in Rural Areas

The proportional decline in EI usage between 1992 and 1995 for rural and urban regions was 40% and 32% respectively. Within both urban and rural areas, however, are regions or "pockets" which vary considerably from the average. The decline in beneficiaries may be for different reasons depending on location. In the past, evidence indicates that a decline in rural areas implies reduced employment opportunities while a decline in urban regions indicates that there are more jobs or longer duration employment available. Population decline in rural areas is also a likely significant factor in reduced EI usage.

urban and rural

Chart 8

Newfoundland and Labrador Statistics Agency: Special Tabulation



Regular EI Beneficiaries - Urban and Rural[3]
Newfoundland and Labrador, 1992 and 2005

Duration of Employment is Up Significantly Since Early 1990s

Individuals are now working longer before applying for EI. In 1992, the average number of weeks worked prior to applying for EI was 22.8. By 2005, this figure had increased by 9.2 weeks (or 40%) to 32.0 weeks. Changing EI regulations which effect eligible benefit duration and benefit amounts, along with increased employment opportunities in recent years, have contributed to this trend.

Average Qualified Weekly Benefit	$245	$296	$51	21
Median Qualified Weekly Benefit	$233	$308	$75	32
Average Total Benefits Paid in Year	$6,550	$6,780	$230	4

Table 3

Newfoundland and Labrador Statistics Agency: Special Tabulation

Duration of Claims is Down Since Early 1990s

The length of time people collect benefits has declined over the past decade. In 1992, the average number of annual benefit weeks paid to regular EI beneficiaries was 26.6. By 2005, this figure had declined by 3.5 weeks (or 13%) to 23.1 weeks. Changes to regulations in 1994 and again in 1996 which shortened the eligible duration of benefit periods is a contributing factor. Increased employment opportunities in recent years have also likely played a role.

Average Benefits Paid Have Not Changed Significantly

While the average weekly benefit for which workers have qualified has increased, total annual benefits paid to individuals have changed little. Average eligible weekly benefits are up 21% and half of EI clients qualified for a 32% higher benefit in 2005 versus 1992. However, the average annual benefit amount paid to regular beneficiaries has increased by only 4%, from $6,550 in 1992 to $6,780 in 2005. The shorter duration for which workers now collect benefits is the major factor for keeping average total benefits paid nearly the same as 1992.

Employment Insurance

trends and usage in Newfoundland and Labrador

Income Security Benefits Paid to Individuals Remain High

Despite the reduction in EI use in recent years, total payments from the major income support programs remain over one billion dollars. However, total amounts from these programs have declined since the early NCARP/TAGS period when benefits peaked at approximately $1.4 billion.

Fish Harvesters

Trends for self-employed fish harvesters are different than those recorded for EI users in the rest of the economy. The moratorium on the Northern Cod fishery caused fishing EI usage to decline by nearly half between 1992 and 1993. As a result of the moratorium, the NCARP program was implemented in 1992 and later replaced by TAGS in 1994. Only after individuals began to exit TAGS in 1996 to its termination in 1998, did the number of beneficiaries begin to climb.

In 1991, there were 11,960 individuals who opened a fishing type claim. By 1994 this figure had dropped to 6,430 but was at 11,200 in 2005.

Chart 12

Statistics Canada, 73-001 and CANSIM Matrix # 005705

Benefits Paid at Highest Levels in 2003

The amount of benefits paid to individuals with fishing type claims was at its highest level ever in 2003 at $179.7 million.[5] This is $81.6 million more than was paid in 1991, prior to the moratorium; a 83% increase. This figure declined to $136.0 million in 2005.

The increase in benefits can be attributed to a number of factors which affect eligible benefit amounts such as higher incomes in the fishery, as a result of higher-valued shellfish species like crab, as well as increased negotiated prices paid for other species. The 1997 changes to Fishing EI Regulations that allowed more harvesters to qualify for two claims a year if they had sufficient earnings has also been a factor.

Under the new EI program as it relates to fish harvesters, many more self-employed fish harvesters can qualify for two claims in the same calendar year, unlike the old UI program where this option was more difficult.[6] In 1991, 2.4% of fish harvesters initiated a second fishing claim in the same year; in 2005, 34.9% initiated more than one claim (note that this figure is down from 45.9% in 2004). In occupations other than fishing, the average in 2005 was 2.3%.

---

[5] *This figure includes additional benefits paid to some fish harvesters through HRDC's anti-dating provision, which allowed some individuals to be paid retroactive benefits for EI eligibility prior to 2004*

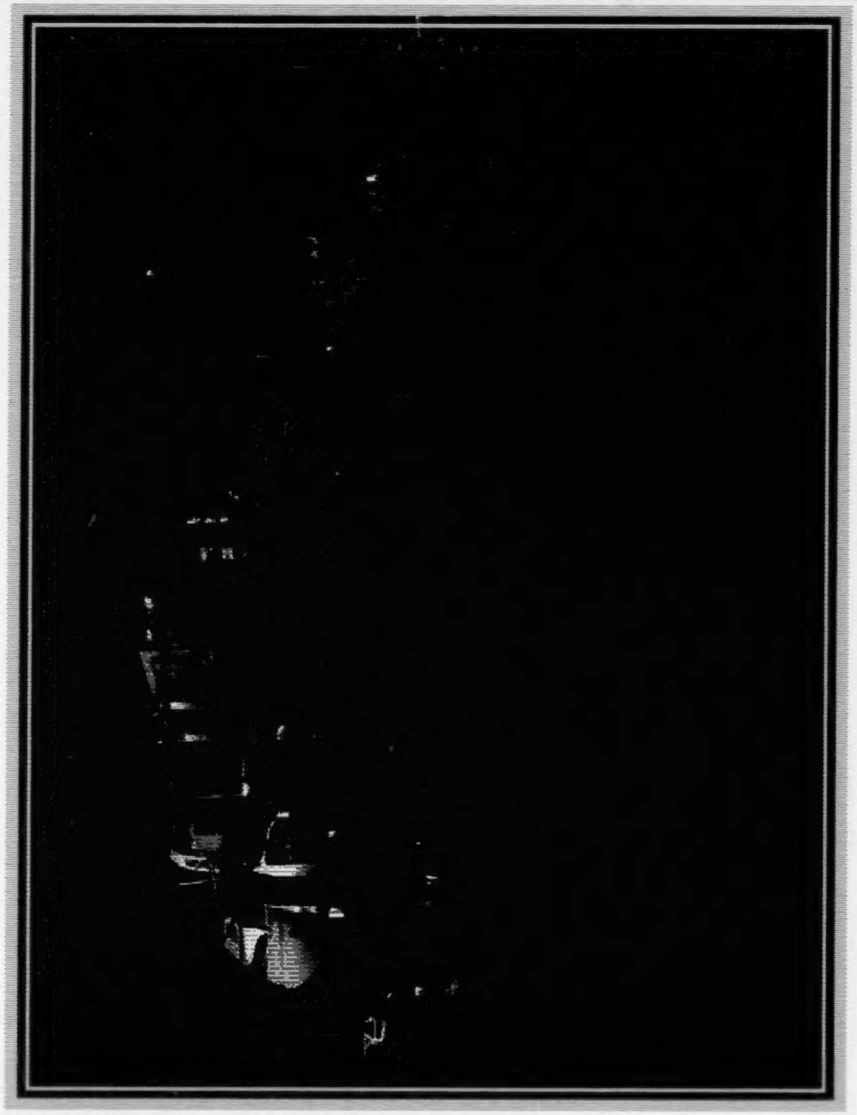
[6] *A major change for fishing type claimants as a result of the 1996 EI reforms was that program access was now based on amount of earnings instead of weeks worked.*

Employment Insurance

trends and usage in Newfoundland and Labrador

The average annual benefit paid to fish harvesters has increased from $7,630 in 1992 to $10,210 in 2005. The average paid to regular type claims was $6,780 in 2005.

The number of younger individuals who collect fishing EI has declined, although the drop has not been as large as for other occupations. In 2005, 26% of individuals collecting fishing type EI were less than age 35. This is a drop of 15 percentage points from 1992 (41% to 26%); compared to regular claimants less than age 35, the decline was 19 percentage points (52% to 33%).



Employment Insurance

data reference

This Section provides detailed data relating to the EI program and its clients. Because EI data are derived from administrative files, special tabulations must be prepared to provide the data when they are requested. This can involve waiting times that are inconvenient to those who need the data quickly. The Reference is intended to eliminate waiting times for the majority of those who contact the Agency for EI data. The data in the Reference are presented in "look-up" tables that respond to most frequently asked questions. A list of other tables that can be provided upon request is provided in Appendix 2.

[1] *A small number (less than 0.3%) of individuals were excluded from the table due to unreported gender, age or occupation.*

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

[1] *A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender or occupation. Figures may not add to total due to rounding and cell supression (..).*

[2] *Rural regions exclude the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.*

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

Occupation, Gender and Average Benefit Rates of Regular EI Beneficiaries[1] Newfoundland and Labrador, 1992 and 2005 Urban Areas Only[2]

[1] A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender or occupation. Figures may not add to total due to rounding and cell supression (..).

[2] Urban regions include the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.

DEFINITIONS:
N - Number of cases
Mean - total divided by number of cases
Median - The value below (above) which 50% of total cases fall.

Employment Insurance Data Sources

Newfoundland and Labrador Statistics Agency - Employment Insurance Program Data

Much of the income security related data used in this report were obtained from in-house data sources developed and maintained at the Newfoundland & Labrador Statistics Agency. The source of these are listed as "special tabulation" in the report.

EI Data Tables Available by Special Request

- Date of birth (age)
- Gender
- Postal Code (sub-geographic location)
- Eligible weekly benefit rate
- Benefits paid
- Date of claim
- Claim type
- Insured hours/weeks
- Occupation type

The Department of Human Resources and Development Canada (HRDC) UI/EI data in this report came from databases created using data received from HRDC under a special data-sharing agreement. These NLSA databases contain data as far back as 1982.

Statistics Canada - Employment Insurance Program Data

- Income beneficiaries by province, type of income benefit and sex, monthly, CANSIM II Table 276-0001
- Beneficiaries receiving regular benefits without reported earnings by province and age group, monthly, CANSIM II Table 276-0002
- Number of disqualifications and disentitlements by province and reason, monthly, CANSIM II Table 276-0003
- Claims received and allowed by province and type of claim, monthly, CANSIM II Table 276-0004
- Benefit payments by province and type of benefit, monthly, CANSIM II Table 276-0005
- Beneficiaries by province, 1996 census division and sex, monthly, CANSIM II Table 276-0006
- Earnings of employees contributing to employment insurance program by province and sex, annual, CANSIM II Table 276-0007
- Beneficiaries by province, census metropolitan areas, census agglomerations and sex, monthly, CANSIM II Table 276-0009
- Employees contributing and their contributions to employment insurance by province, age group and sex, annual, CANSIM II Table 276-0010
- Weeks paid by province and type of benefit, monthly, CANSIM II Table 276-0015
- Average weekly payments by province and type of benefit, monthly, CANSIM II Table 276-0016
